Three local inputs

$$a_i = \frac{mA_i}{mB_i + \varepsilon}$$

$$\beta_i = mB_i\Delta t, \quad u_i^n$$

Selected inverse

$$\hat{u}_i = \hat{\Phi}(a_i, \beta_i, u_i^n)$$

$$u_i + \beta_i[f(u_i) - a_i] = u_i^n$$
